

September
THROUGH
December
2020

Join us for the
ICAR2020
VIRTUAL MEETING

ICAR2020 has gone virtual and will be comprised of weekly webinars that feature invited speakers from the originally planned Seattle conference plus a few new speakers – internationally recognized experts who will address recent progress in antiviral drug development. **ICAR2020** will take place this fall from September-December 2020 and will be **free-of-charge to all ISAR members.**

In order to participate in **ICAR2020**, please click on the Register Now link.
ICAR2020 is free of charge to current members in good standing.

For details on membership benefits, please visit:

VIRTUAL MEETING

SPEAKERS

Exact dates and times for each **ICAR2020** webinar will be released as that information becomes available.

Visit <https://www.isar-icar.com/ICAR> for updates.

DATE	SPEAKER	PRESENTATION
September 10	Johan Neyts, PhD	Antiviral research in the age of COVID: much accomplished, but far to go
September 17	Ann Kwong, PhD	Lessons learned from the discovery of an HCV protease inhibitor applied to the discovery of an influenza PB2 inhibitor
September 24	Jason McLellan, PhD	Development of vaccine antigens and antibodies for SARS-CoV-2
September 29- October 1	Yoshi Kawaoka, DVM, PhD Hugh Watson, PhD	Towards better control of influenza Challenges of developing a mab against an arbovirus: A case study in chikungunya disease
October 6-8	Alina Baum, PhD Tomas Cihlar, PhD	REGN-EB3: History and path to clinic of an Ebola therapeutic Update on remdesivir and COVID-19
October 13	Michael Jacobs, PhD	Evolving treatments for COVID-19
October 15	Fabien Zoulim, MD, PhD	The path towards a cure for chronic hepatitis B
October 20-22	Mark Denison, MD Florian Klein, MD	Update on SARS-CoV-2 research Broadly neutralizing antibodies targeting HIV-1
October 27-29	Davide Corti, PhD	Using human monoclonal antibodies to prevent and treat viral diseases
October 27 or 28	John DeVincenzo, MD	Developing treatment and prevention strategies for RSV infection
November 3	Keith Jerome, MD, PhD	Gene editing for cure of persistent viral infections
November 5	María-Jesús Pérez-Pérez, PhD	Antiviral drug discovery: a multifactorial challenging endeavor
November 10-12	Christina Spiropoulou, PhD	Testing drugs and vaccines against emerging viruses
November 17-19 November 17 or 19	Daniel Ruzek, PhD Mark von Itzstein, PhD	Antiviral therapy of tick-borne encephalitis Targeting the multi-functional parainfluenza virus HA-NA for drug discovery
December 3	Zhengqiang Wang, PhD	Toward capsid-targeting antivirals... against various stages of HIV-1 replication
December 8-10	Priscilla Yang, PhD	Chemical approaches to the validation of new antiviral targets
